Aftermarket Specialists

Quality, innovation and customer service aren't just catch phrases at Camco - they're our goals. And we work toward them every day, in every department from the front office to shipping. Each of our more than 200 employees stands behind the products that bear the Camco name.

When Camco began in 1968 with one employee and one product, there was little indication that we would experience the phenomenal growth that resulted in our being named to the North Carolina 100 by Business North Carolina for six years in a row. Hard work, determination and adherence to these ideals have enabled us to achieve great success.

We take pride in providing outstanding service. Most orders received by noon are shipped the same day. Our friendly, knowledgeable customer service staff stands ready to assist our customers with any questions.

Camco is a small, privately-held company with big aspirations. When you place an order with us, we'll demonstrate this with our actions. Let us help make your business as successful as it can be.

FEATURED PRODUCTS

Apartment-Sized Washer Drain Pan

White polypropylene plastic washer drain pan designed specifically for apartment-sized and stackable washers. Will not rust, corrode or crack. Includes 1"/1.5" PVC drain fitting Bottom or side outlet (not pre-cut) • 1"/1.5" drain can pass all codes • Easy to install • Matte finish • OD 28" x 30"

20762

Page 19

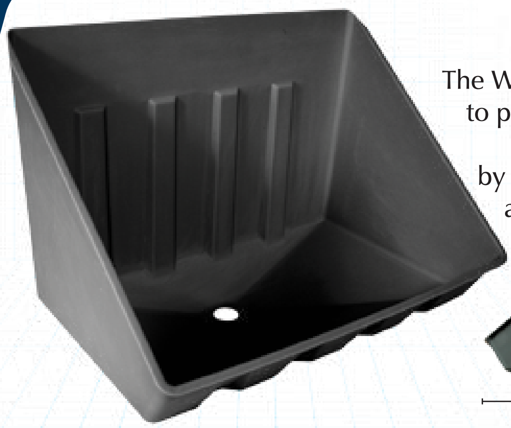

Water Heater Element Quick Change

Save time and water: Turn off water at the water heater to create a vacuum. Securely attach Water Heater Element Quick Change and place bucket handle in grooves of tool to catch excess water while replacing your water heater elements.

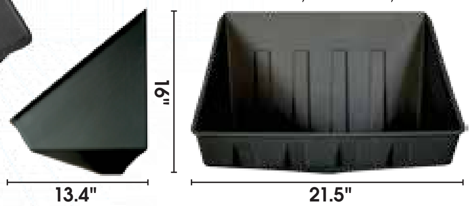

09973

Page 9

Tankless Water Heater Drain Pans

The Wall Saver™ is made of injection-molded no-break polypropylene to provide superior strength and durability. Wall-mounted drain pan fits under most whole-house tankless water heaters; is required by building codes. Recyclable and non-toxic. U.S. Patents 8104634 and D653745. W: 21.5"; H: 16"; D: 13.4". Drain fitting included.

11470 with PVC Fitting
11476 with CPVC Fitting

Page 19

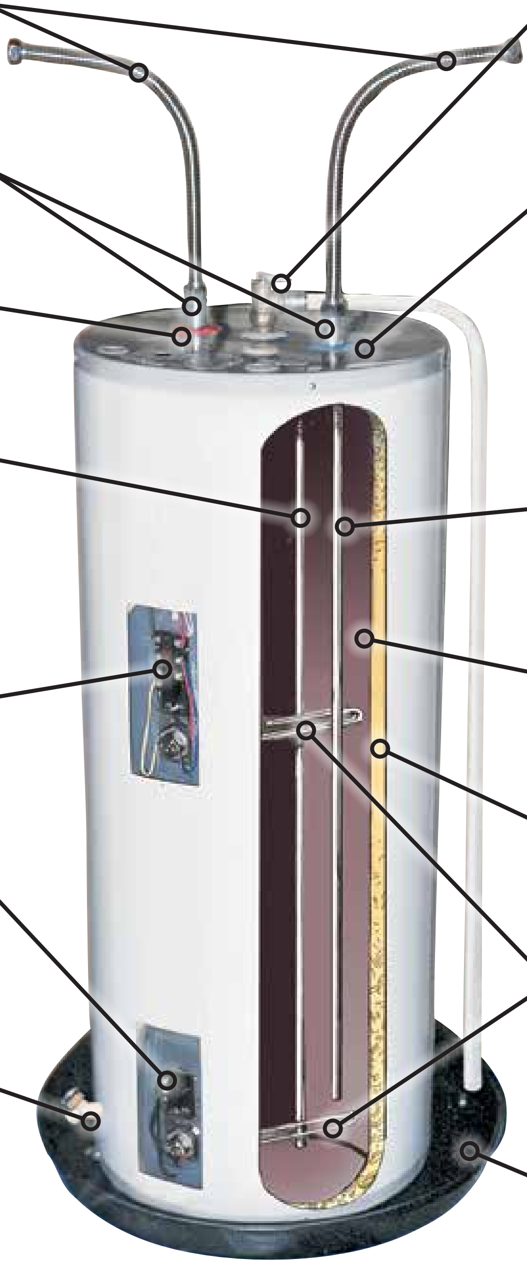

Heavy Duty Contractor Hose

Reinforced, abrasion resistant hose for hot water use. Spring reinforced to reduce kinking. Stainless steel fittings. ⅝" diameter. Easier to clean; drinking water safe. 10-year limited replacement warranty Available in 25 ft, 50 ft & 100 ft lengths.

22863   25 ft Contractor Hose
22873   50 ft Contractor Hose
22883 100 ft Contractor Hose

Page 17

Residential Water Heater Construction

Flexible stainless steel or copper connectors — connects to hot and cold water pipe system

Dielectric nipples or heat traps — with thermoplastic lining to prevent thread corrosion

Hot water outlet — water supply to house faucets

Anode rod — a rod composed of sacrificial metal that prevents deterioration of the steel tank and elements by controlling electrolysis

Upper thermostat — turns heating elements on or off to maintain preset or desired temperature; regulates power to the lower thermostat

Lower thermostat — controls lower heating element to maintain desired temperature

Drain valve — a metal or plastic valve used when draining heater for periodic cleaning or replacement of a defective water heater element

Temperature and pressure (T & P) valve — safety device to relieve excessive pressure and/or temperature buildup in tank

Cold water inlet — supplies water for heating to the tank

Run-off tube — carries water or steam safely to drain or drain pan if T & P valve activates

Cold water dip tube — a non-metallic tube that directs incoming cold water to the bottom of the tank

Steel tank with glass lining— to prevent corrosion

Insulation — helps maintain consistent water temperature

Heating element — a resistant type electrical component to generate heat

Drain pan — plastic or metal pan to collect and drain off leaking water or water from activated T & P valve; must be plumbed to drain

Water Heater Element Warranty

CAMCO USA

Limited Warranty: Elements will be replaced to the original purchaser if proven defective in materials or workmanship. No labor costs are included in this warranty. Complete warranty information available upon request. Warranty is void if element is installed in anything other than a residential hot water heater.

Standard and Better Elements – 1 year from purchase date.

Premium Elements – 5 years from purchase date.

No expressed or implied warranty is made with respect to this product including warranty of merchantability or fitness for a particular purpose. If an item is determined to be defective our return policy is limited to the replacement of original purchase.

Electric Water Heater Elements

I don't have hot water. How do I determine what is wrong?

Check the breaker or fuse box for a blown fuse or tripped breaker. If this is not the problem, shut off the power to the water heater. (IMPORTANT!) The problem may be caused by a defective or shorted element(s) or thermostat(s) or both. If you are experienced with plumbing and electrical tools, you can do the repairs yourself. If you are at all hesitant, call a plumber or electrician. Camco Mfg. provides a water heater tester (#10023) that lets you test the elements and thermostats while they remain installed on the heater. Instructions are included.

What causes water heater elements to fail, some sooner than others?

Several reasons: power surges, lightning, lime buildup and dry-firing (see below: ***What is meant by the term "dry-firing?"***). Most water heaters are sold with high watt-density (HWD) elements. These are the least expensive and are the most susceptible to these problems. On a "Standard-Better-Premium" scale the HWD elements are STANDARD.

Why are some water heater elements folded back?

These are low watt-density (LWD) elements. The heat output (watts) per square inch of surface area is lower than that of a regular element. In order for total heat to be the same, the total surface has been increased. It is folded back so the length will fit the tank. Not all LWD elements are fold-backs. In areas with "hard" water, a LWD element resists lime build-up on its surface, thus extending its life. These elements are BETTER.

What are Lime Life elements?

These elements are PREMIUM. They are made of stainless steel and are ultra low watt-density. These features prevent lime build-up and extend the life of the element. A Lime Life element is resistant to dry-firing. These elements carry a limited 5-year warranty. Because of the low watt-density, these elements are folded back to reduce the length. Some are rippled to further reduce the length to fit the diameter of the tank.

What is meant by the term "dry-firing?"

High watt density and low watt-density are designed to function in water. If not surrounded by water, the intense heat they generate (dry fire) will cause them to burn out. The water tank must be full of water whenever the power is on. Dry-fire failure is not covered by any warranty. It is a human error. Dry-fired elements are easily detected. The element is soft and easily bent. In most cases, a hole is burned through the surface.

Can I replace the element in my water heater with higher wattage elements?

It is not recommended. The water heater is designed for that element size. Higher wattage might require heavier gauge wire and a larger capacity circuit breaker.

Can I use a water heater element in an application other than a water heater?

It is not recommended. These elements are designed specifically for residential water heaters. We have no experience or knowledge of other uses. You may do so at your own risk. Non-water heater use of our elements and thermostats voids all warranties.

I just installed a water heater element and now my heater makes a humming sound.

This is called a "harmonic." If the element is installed so that the loop is horizontal, the vibration from the electric current will cause the element to hum. This noise can be prevented by installing so that the loop is vertical. The flanged elements have markings on the flange indicating the vertical position of the loop. To eliminate the humming on screw-in elements, tighten the element another half turn. In some instances, less than a half turn will stop the harmonic.

Why aren't the two elements operating simultaneously?

In most residential water heaters only one element is on at any given time. The lower element does 90% or more of the heating. During periods of heavy use, the upper element clicks on (the lower switches off) and heats the upper part of the tank to 120°. It then shuts off, turns on the lower, and it heats the water to the setting of the lower thermostat.

Frequently Asked Questions About Water Heaters

Electric Water Heater Thermostats

Are water heater thermostats adjustable?

Most water heater thermostats provided by Camco are adjustable. They are factory set at 120°. On a two-element water heater, it is not recommended that the upper thermostat be adjusted. If a higher water temperature is desired, adjust the lower to a higher setting. Both may be lowered if a cooler temperature is desired. On thermostats without a degree dial, the temperature range is:

the Dot =	110º F
Hot=	120º F
A=	130º F
B=	140º F
C=	150º F
Very Hot=	160º F

I noticed that there are two styles of water heater thermostats. Are they interchangeable?

Yes, like models of the two thermostat manufacturers are interchangeable. Use caution in selecting the correct model for their position on the heater (upper, lower, single element T-stat).

How do I know which thermostat to buy?

A two-element water heater has two thermostats: an upper and a lower. Each must be replaced with a thermostat with the same function: upper for upper, lower for lower. They cannot be interchanged, as they perform specific functions. A single-element water heater has only one thermostat and that is called a "single element thermostat." The upper and lower thermostats for a two-element heater cannot be used on a single-element water heater and vice versa.

Other Miscellaneous Questions

I opened the drain valve and very little water flowed.

You probably have sediment and scale build-up on the bottom of the tank that is blocking the valve. In areas where the water is very "hard" or well water is used, lime build-up can occur. The high heat of the heater elements will cause scale and sediment to coat the elements and settle on the tank bottom. Light build-up of sediment may be removed by attaching a water hose to the drain valve. Drain the tank every 6-12 months, more often if necessary.

IMPORTANT: TURN OFF POWER FIRST OR IT COULD CAUSE ELEMENT BURN OUT.

The Temperature and Pressure relief valve has a threaded outlet. What attaches to it?

The T&P valve outlet must have a run-off tube attached to it. Most building codes require a tube that terminates 6" from the floor. If the T&P valve activates, water should flow into a drain or into a water heater pan that is plumbed to a drain. This run-off tube may be metal or plastic. Check local plumbing codes for correct material for your area.

What are dielectric fittings and connectors?

When fittings of unlike metals are joined together (copper with brass, brass with steel, etc.) the faint electrical current that is present in any water pipe system will cause erosion of the threads in one or both of the fittings and cause leaking. The plastic liner or sleeve in the dielectric fittings and connectors prevents this from happening. Note: Stainless steel fittings and connectors are naturally dielectric and do not need the plastic lining.

What is an anode rod?

It is a magnesium or aluminum rod inserted in the heater, from the top, in an opening of its own or as part of the outlet nipple. The metal is self-sacrificing (corrodes); this protects the tank and elements from corroding. Replacement anode rods are available and easy to install.

Are water heater drain pans necessary?

It depends on the plumbing codes in your area and the location of your water heater. If your heater is in a garage or a non-finished basement where leaking water would flow harmlessly into a drain, a pan is not necessary. However, if the heater is in or above a living space where leaking could cause extensive water damage, it is cheap insurance to protect your home from such an event.

What type of pan should be used?

Plastic pans should be used with electric water heaters, and metal pans should be used for gas water heaters and can be used with electric water heaters. Codes in some areas require metal pans for all heaters installed in a living space.

What is the purpose of a water heater stand?

A stand is used primarily with gas water heaters when installed in garages and basements where combustible fumes may exist. Gas heaters have an open flame, and tests have shown that placing a gas water heater at least 16" above the floor will offer some protection against combustion of volatile fumes.

Water Heater Elements

Fits most models: • American • A O Smith • Bradford White • Craftmaster • General Electric • GS Wood (some models) • Kenmore • Lochinvar • Maytag • Mor-Flo • Reliance • Rheem • Richmond • Ruud • Sears • State • Whirlpool

Premium - Lime Life Water Heater Elements - Ultra Low Watt Density - Our best immersion elements

UL listed & Canadian Listed - 5 year limited warranty (see page 3) Detailed instructions and gasket included with each packaged element

Made of the highest grade nickel and chromium incoloy - Ultra low watt density: burns at 50 watts per square inch - Resists dry firing - Best when water has high mineral content - Heats in lime and sand buildup that would burn out ordinary elements

For the State Industries manufactured Duron tank water heaters. Also used in Sears Duron tank water heaters.

Element Conversion Kit

Use a standard screw-in element to replace a flat, universal or round flange element using the Element Conversion Kit.

This adapter kit is intended for use with a screw-in type element to replace water heater elements that look like figures 1, 2 or 3.

Stock#	Description	Qty.
07223	Universal Adapter Kit	12
07223 contains: (1) 2-1/2" 4-bolt Adapt-a-Flange, (1) Four Hole Gasket, (4) 5/16" -18 5/8" Hex Washer-Head Bolts (1) Screw-In Gasket and (1) Thermostat Bracket		
07222	2-1/2" 4-Hex Bolt Adapt-A-Flange only	50

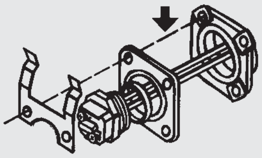

Directions:
Remove screws and discard old element and thermostat bracket.
Install screw-in element and gasket supplied with element into square adapter flange. Tighten firmly.

Install gasket (supplied with this kit) in element seat, being careful to ensure a good seat. See diagrams to determine which gasket to use.

Install element with new thermostat bracket using old screws or new ones provided. Be careful that screws are not too long and bottom out against the tank.

Replacement gasket goes here.

Water Heater Element Quick Change

Save time and water: Turn off water at the water heater to create a vacuum. Securely attach Water Heater Element Quick Change and place bucket handle in grooves of tool to catch excess water while replacing your water heater elements.

09973

Collapsible Bucket

The perfect size for many around-the-house uses. Also great for RVing, camping, fishing and more. Great for use in tight spaces; under sink drain traps and water heater drain valves. Opens to 9.25 inches and folds down to less than 2 inches for compact storage. Zippered storage bag included.

Water Heater Thermostats and Accessories

About Electric Water Heater Thermostats

Double Element Heaters

The majority of residential water heaters are designed with two elements controlled by two different thermostats. The upper thermostat is the "brain" of the water heater. It controls the heat generated by the upper element, and it controls power delivered to the lower thermostat. Most residential water heaters are designed to have the upper and lower thermostats work separately.

The upper and the lower thermostats never operate simultaneously. The upper thermostat has a safety device attached to it called a High Limit Control (HLC). It has a heat sensor that will shut down the power to the heater if the temperature of the tank exceeds safety limits. The button may be reset to restore power to the heater. ***Do not reset the HLC until the problem causing the unit to trip is corrected.***

Operation Cycle of Double Element Heaters

1. The upper thermostat senses cold water and has energized the upper element. Although contacts on both thermostats are normally closed in response to the cold water, the double-throw upper thermostat completes the circuit only to the upper heating element. Because of the double throw action, power to the lower thermostat is cut off.
2. As the upper element operates, it heats the water above it (approximately one quarter of the tank's capacity).
3. The water in the upper quarter of the tank is heated until it reaches the temperature set on the upper thermostat. The upper thermostat then breaks the circuit to the upper heating element and completes the circuit to the lower thermostat.
4. The lower element then operates and heats the remainder of the water in the tank.
5. The lower thermostat breaks the circuit to the lower element when the water in the lower portion of the tank has been heated to its setting. The entire tank is now filled with hot water.
6. As hot water is drawn from the top of the tank, cool water is delivered to the bottom of the tank through the dip tube. The lower thermostat reacts to the entering cold water by closing its contacts, energizing the lower heating element and heating the water as it enters the tank.
7. Thermostats are factory preset at 120°.

Single Element Heaters (with high limit)

Most of the smaller water heaters and point-of-use heaters are designed with only one element and thus only one thermostat. Most of the single element water heaters are wired for 120v. Never connect or adapt a 120v water heater to a 240v system.

The high limit control is located on the thermostat. (See diagrams for proper wiring.)

NOTE: Because the HLC is attached to the single element thermostat, it looks similar to an upper thermostat for a two-element heater. Care should be taken in choosing the correct replacement thermostat. An upper thermostat will not work on a single element heater.

Therm-O-Disc Commercial Thermostats

Stock #	Description	T-O-D Style	HLC	Application Voltage	Qty.
08304	Upper Thermostat - 180° F	59T	Yes	480/240/208/120	6
08314	Lower Thermostat -180° F	59T	-	480/240/208/120	6

HLC = High Limit Control

For Commercial Use Only

UL Listed

These thermostats are for commercial use only, not to be used in a domestic setting.

Therm-O-Disc Style Thermostats are not supplied with a Protective Shield. Order 08113 or 08103 (page 11) if shield is damaged or missing.

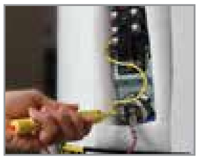

08314 Lower Thermostat

08304 Upper Thermostat

Water Heater Tester

Tests elements and thermostats while they are in the heater. May also be used to test continuity in fluorescent lights, fuses and all appliances. Sensitive enough to measure even the fine filament wire in a light bulb. Sensitive LED light indicates continuity. Unbreakable body with protective cover over light and probe. More useful than a circuit tester. Complete instructions and batteries included.

Antifreeze for potable water systems

30757
Easy Going

30807
Arctic Ban

Antifreeze for potable water systems

For use in winterization of fresh/potable water systems in campers, RVs and summer homes. High-grade formulas provide complete freeze protection down to -50° F. (-46 °C) with no mixing required. Use full strength—do not dilute. All ingredients are listed in the U.S. Federal Register (GRAS - generally regarded as safe). Not recommended for winterizing boat engines.

Easy Going™ -50

Virgin propylene glycol-based formula is safe, odorless and tasteless.

57453	Olympian™ GM4 GasMatch	12

CAMPLighter Elite™ Butane Lighter and Bottle Opener

Open a bottle and light your grill or heater with one handy and attractive tool. Matte aluminum finish with black accents. Textured back for a sure grip. Adjustable flame; refillable. CPSC certified.

58023	CAMPLighter Elite	12

GM9 2-pack Refillable GasMatches

Great for barbecues, fireplaces, pilot lights, kerosene heaters and candles. Safety lock, CPSC certified, adjustable flame, fuel viewing window. 11" long.

57473	Olympian™ GM9 GasMatches-2/card	12

Ronson® Butane

Multi-fill injectors in 78 gram and 165 gram sizes.

57416	Ronson 78 Gram Butane Fuel	12
57496	Ronson 165 Gram Butane Fuel	12

GM12 Continuous Ignition Multi-Sparker

This handy igniter is the one designed exclusively for igniting gas appliances. No butane to refill. The continuous ignition piezo electric sparker assures a large and immediate continuous spark. The automatic illumination micro-light and curved nozzle make tough lighting jobs easy. Uses one C battery (included).

57533	GM12 - 13" long (7" pipe)	12
57561	GM12X - 26" long (20" pipe)	24
57591	GM12XE - 31" long (25" pipe)	24
